## Using the PCAN-Dongle under Win2000/XP

To install the PCAN-Dongle under Win2000 or XP the following settings are required:

- 1. Switch the Parallelport Mode in the BIOS to ECP (not "ECP/EPP", not "EPP").
- 2. The version of the driver PEAKCAN.SYS or PCAN\_DNG.SYS should be V2.30 or higher. (See the information dialog under control panel "CAN-Hardware". If you are using the PCAN-Light-driver you will find the driver version under help->about in the PCAN-View program).
- 3. The Interrupt of the parallelport must be activated by the devicemanager. You have to be Administrator to change these settings. Click on "ECP Printer Port LPT1" and use the right mouse button to click on "Properties". Goto "Port Settings" to find the following dialog:

ECP Printer Port (LPT1) Properties	? ×
General Port Settings Driver Resources	
Filter Resource Method Try not to use an interrupt Never use an interrupt Use any interrupt assigned to the port	
Enable legacy Plug and Play detection	
LPT Port Number:	
OK	Cancel

4. Please click on "Use any interrupt assigned to the port". Click on OK and reopen the properties dialog "Ressources" to view the I/O Range and Interrupt Request for the parallelport:

ECP Printer Port (LPT1) Properties	? X
General Port Settings Driver Resources	
ECP Printer Port (LPT1)	
Resource settings:	
Resource type Setting   Interrupt Request 07   Input/Output Range 03BC - 03BF   Input/Output Range 07BC - 07BE	•
Setting based on: Current configuration	<b>.</b>
Conflicting device list:	
No conflicts.	*
ОК	ancel

5. Install the PCAN-Dongle with the I/O address and IRQ of the parallelport under "CAN-Hardware" in the control panel or in the PCAN-View program if you are using the PCAN-Light driver.
