# 1 Introduction

The PCAN-MicroMod FD is a small plug-in board with CAN and CAN FD connection on the one side and various physical inputs and outputs on the other side. The logical linking of both sides is done by the microcontroller NXP LPC54618. With the MicroMod FD, electronics developers can easily integrate I/O functionality with CAN connection into their project.

The PCAN-MicroMod FD is configured using the supplied Windows software. In addition to simple I/O mapping to CAN IDs, function blocks are also available for processing the data. The configuration created on the computer is transferred via the CAN bus to the MicroMod FD which then runs as an independent CAN node. Multiple modules can be configured independently on a CAN bus.

For the PCAN-MicroMod FD, ready-to-use motherboards in an aluminum housing and an Evaluation Board for the development of own applications are available.

This document describes the hardware and the functions of the plug-in board PCAN-MicroMod FD. Separate documents exist for the motherboards from PEAK-System (e.g. Analog 1) and for the Evaluation Board.

## 1.1 Features Overview

- Plug-in board with 2 double pin strips of 50 pins each, 50 mil pitch (1.27 mm)
- NXP LPC54618 microcontroller with Arm® Cortex® M4 core

- High-speed CAN connection (ISO 11898-2)
  - Complies with CAN specifications 2.0 A/B and FD
  - CAN FD bit rates for the data field (max. 64 bytes) from 20 kbit/s up to 10 Mbit/s
  - CAN bit rates from 20 kbit/s up to 1 Mbit/s
  - Microchip CAN transceiver MCP2558FD
- 8 analog inputs
  - Measuring range unipolar 0 to 3 V
  - Resolution 12 bits, sample rate 1 kHz
- 8 digital inputs
- 8 digital outputs
- 2 frequency outputs
- Selective configuration of up to 16 devices in a CAN network based on the module ID
- Supply voltage 3.3 V
- Dimensions 33 x 36 mm
- Extended operating temperature range from -40 to 85 °C (-40 to 185 °F)

## 1.2 Operation Requirements

- Board with socket strips or hole grid for mounting the PCAN-MicroMod FD (Evaluation Board, motherboard from PEAK-System or self-development), see also Appendix B *Dimension Drawings* on page 24.

Possible socket strip (2 pieces) as counterpart to the PCAN-MicroMod FD: Amtek 5PS3MSA44-225GONPNRU-00
- For the creation and transfer of a configuration:  
Computer with Windows 10, 8.1 (32/64-bit) and a PC-CAN interface from PEAK-System  
(Recommendation: PC-CAN interface with CAN FD capability, e.g. PCAN-USB FD)

## 1.3 Scope of Supply

- PCAN-MicroMod FD plug-in board
- Configuration software for Windows
- Manual in PDF format
- Optional: Pin adapter for 100 mil pitch

# 2 Electrical Connection

This chapter covers the signal assignment of the pins on the PCAN-MicroMod FD and its possible circuitry.

## 2.1 Connectors

The PCAN-MicroMod FD has two double pin rows (A, B) with 50 pins each (first column in the following tables). Thus, the MicroMod FD can be plugged onto boards with matching socket strips (50-mil/1.27-mm grid, see also Appendix B *Dimension Drawings* on page 24).

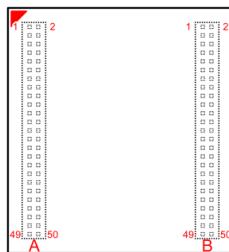

Possible socket strip (2 pieces) as counterpart to the PCAN-MicroMod FD: Amtek 5PS3MSA44-225GONPNRU-00

On request, PEAK-System offers an adapter for circuit boards with 100-mil/2.54-mm grid). See also Appendix C *CPU Adapter for 2.54 mm Pitch* on page 25.

The MicroMod FD has a white mark on the upper left corner (pin A1) for better orientation when plugged in.

**Attention!** Electrostatic discharge (ESD) can damage or destroy components on the circuit board. Take precautions to avoid ESD when handling the circuit board.

Pin layout of the two double pin headers, direction of view from above through the circuit board (orientation when plugged in).

## 2.2 Circuitry

For the basic operation of the PCAN-MicroMod FD, a **minimal circuitry** with the following components is required:

- Voltage supply 3.3 V DC
- CAN connection (CAN-High, CAN-Low)
- Pull-down for module ID inputs
- Feedback of the analog reference voltage
- Push button to ground for CAN flash mode (with pull-up resistor)
- Reset push button to ground

The minimum circuitry is shown in the circuit diagram in Appendix D *Minimum Circuitry* on page 32.

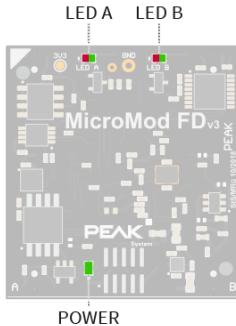

A **comprehensive circuit example** can be found in the circuit diagram for the separately available Evaluation Board. The circuit diagram is part of the corresponding user manual PCAN-MicroMod FD Evaluation Board.

**Tip:** When designing the circuitry for the PCAN-MicroMod FD, also observe the protection against overvoltage and reverse polarity at inputs.

# 3 Operation

## 3.1 Status LEDs

Positions of status LEDs on the PCAN-MicroMod FD

<b>LED A (upper left)</b>	<b>Status</b>	<b>Description</b>
No function		Reserved
<b>LED B (upper right)</b>	<b>Status</b>	<b>Description</b>
Green blinking (1 Hz)	Normal operation	
Green flickering	Receiving configuration	
Green and red blinking alternately	No valid configuration	
Orange quick blinking (4 Hz)	CAN Bootloader	Ready for transfer. New firmware can be transferred to the PCAN-MicroMod FD via CAN bus using the Windows program PEAK-Flash.
Red on	Firmware error	The PCAN-MicroMod FD does not have a valid firmware.
<b>Power LED (lower location)</b>	<b>Status</b>	<b>Description</b>
Green on	Power Supply	The supply voltage of 3.3 V is applied to the PCAN-MicroMod FD.

## 3.2 Reserved CAN ID 7E7h

To configure the PCAN-MicroMod FD, the 11-bit CAN ID 7E7h is used. Accordingly, the PCAN-MicroMod FD Configuration program exchanges data with the module via the CAN bus. When designing your CAN network, make sure not to use the CAN ID 7E7h in any way.

## 3.3 Overview of Services

The PCAN-MicroMod FD provides various functions, called services. The availability of services depends on the used motherboard.

Service	Remark
Symbols (CAN messages)	Definition of the CAN messages used by the PCAN-MicroMod FD with Symbol names (CAN ID) and Variables resulting from Signals within the data bits. Signals can contain initial values and timeout periods (e.g. for CAN problems).
Digital Inputs	Assigned CAN messages can also be transmitted event-controlled. For this purpose, the type of signal change (positive edge, negative edge or both edges) is set as trigger.
Digital Outputs	A Signal has influence either on the state of a digital output or on the duty cycle at a preset frequency.
Analog Inputs	An A/D value can be adjusted with scale and offset. Furthermore, a software low-pass can be activated.
Analog Outputs	This service is only available with a D/A converter being applied to the PCAN-MicroMod FD (e.g. using the Analog 1 motherboard). A D/A value can be adjusted with scale and offset.
Frequency Outputs	Frequency and duty cycle are controlled independently with one Signal each.
Digital Functions	The digital inputs can be logically combined with each other. The result can be passed on to a Signal, to a digital output, or internally as feedback to an input.
Statistics	Statistical data generated by the PCAN-MicroMod FD about the processing and the environment can be passed to Signals.

<b>Service</b>	<b>Remark</b>
Curve Definitions/Curves (characteristic curves)	Analog input data can be converted with the help of curves.
Rotary Encoders	The service can process the signals of manual encoders connected to digital inputs (standard quadrature with 2 bits, max. 500 pulses/sec.).
Functions	A collection of functions that convert one Signal value and place the result on another Signal. Excerpt from the collection: Mult, Mod, And, Hysteresis, Limit, RS Flip Flop, Switch Delay, Greater Than.

Find more details about the functionality and the application of the services in the help of the PCAN-MicroMod FD Configuration program.

# 4 Configuration Program

With the enclosed configuration program PCAN-MicroMod FD Configuration for Windows you can create, edit, and then transfer configurations to one or more PCAN-MicroMod FD via CAN.

## 4.1 Prerequisites for the Configuration Transfer

- Windows 10, 8.1 (32/64-bit)
- PC-CAN interface from PEAK-System, e.g. PCAN-USB FD
- CAN bus connection between the PCAN-MicroMod FD and the CAN interface of the PC

On a computer without PCAN environment, you can create and edit a configuration with the program and transfer the configuration later to the MicroMod FD using another computer with PC CAN interface.

## 4.2 Installing the Configuration Program

The installation program for PCAN-MicroMod FD Configuration is located on the supplied Product DVD.

Steps of the software installation:

1. Insert the Product DVD into the computer drive and execute the navigation program either on request or manually (`Intro.exe`).
2. Klick on *English > Tools*.

3. In the list, find the *PCAN-MicroMod FD Configuration* entry and click on *Install*.
4. Follow the instructions of the installation program.

Retrieve further information about the use of PCAN-MicroMod FD Configuration in the provided help that you can reach via the program (e.g. with the F1 key).

# 5 Firmware Update

Different ways are available in order to update the firmware on the PCAN-MicroMod FD.

Way	Pins for transfer	Pin for flash mode	File type	Required supplements
RS-232	B3: TxD, B5: RxD	B4	Hex	Flash program <a href="#">Flash Magic</a> for Windows
CAN	A43: CAN-H, A45: CAN-L	A32 (LED A blinks quickly orange)	Binary	PC-CAN interface from PEAK-System PEAK-Flash for Windows (freely available)
USB	B23: Vbus, B25: USB1_P, B27: USB1_N	B6	Binary	None (mass storage device in operating system)

\* Must be connected to ground during switch-on.

**Tip:** In order to update the firmware, we recommend the use of the Evaluation Board for the PCAN-MicroMod FD (IPEH-003081 or kit IPEH-003082). This simplifies the connection of the cabling on the one hand and the setting of the flash mode on the other hand.

# 6 Technical Specifications

## Supply

Supply voltage	3.3 V DC
Current consumption	180 mA max.

## Connectors

Connection strips	2 double strips, each with 50 pins
Grid	50 mil (1.27 mm)
See also Appendix B <i>Dimension Drawings</i> on page 24	

## Control and Communication

Microcontroller	NXP LPC54618, Arm® Cortex® M4 Core
Standard firmware	Configuration via reserved CAN ID 7E7h

## CAN

Channels	1
Specification	ISO 11898-2, CAN 2.0 A/B and CAN FD
Transceiver	Microchip MCP2558FD
Nominal bitrates	20 kbit/s – 1 Mbit/s
CAN FD data bitrates	20 kbit/s – 10 Mbit/s
Galvanic isolation	none
Termination	none

## Digital Inputs

Count	8
	Static state: 0, 1
	Frequency: 0 – 20 kHz (only inputs 0 ... 5)
Sampling functions	Duty cycle: 0.0 – 100.0 % (only inputs 0 ... 5)
	Manual rotary encoder (occupies 2 digital inputs each): standard quadrature with 2 bit, max. 500 pulses/sec.
Level	3.3 V nominal

## Analog Inputs

Count	8
Voltage range	0 – 3 V unipolar
Resolution	12 bits
Sample rate	1 kHz

## Digital Outputs

Count	8
Functions	Static state: 0, 1 PWM at 1 – 10,000 Hz (common frequency for all outputs)

## Frequency/PWM Outputs

Count	2
Frequency	20 kHz max.

## Temperature Sensor

Design	integrated
Measuring range	-55 – +125 °C (-67 – +257 °F)
Accessed via configuration	Service “Statistics”

## Additional Data Channels

USB	For firmware update, only via separately available Evaluation Board
RS-232	For firmware update, only via separately available Evaluation Board and with separate flash software

## Measures

---

Size of board	33 x 36 mm
Height incl. pins	13 mm
See also Appendix B <i>Dimension Drawings</i> on page 24	
Weight	9 g

## Environment

---

Operating temperature	-40 – +85 °C (-40 – +185 °F)
Temperature for storage and transport	-40 – +100 °C (-40 – +212 °F)
Relative humidity	15 – 90 %, not condensing

## Conformity

---

RoHS	EU directive 2011/65/EU (RoHS 2) EU directive 2015/863/EU (revised list of restricted substances) DIN EN IEC 63000:2019-05;VDE 0042-12:2019-05
EMC	EU directive 2014/30/EU DIN EN 61326-1:2013-07;VDE 0843-20-1:2013-07

# Appendix A CE Certificate

## EU Declaration of Conformity

This declaration applies to the following product:

Product name: PCAN-MicroMod FD

Item number(s): IPEH-003080

Manufacturer: PEAK-System Technik GmbH  
Otto-Roehm-Strasse 69  
64293 Darmstadt  
Germany

 We declare under our sole responsibility that the mentioned product is in conformity with the following directives and the affiliated harmonized standards:

EU Directive 2011/65/EU (RoHS 2) + 2015/863/EU (amended list of restricted substances)

DIN EN IEC 63000:2019-05;VDE 0042-12:2019-05

Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances (IEC 63000:2016); German version EN IEC 63000:2018

EU Directive 2014/30/EU (Electromagnetic Compatibility)

DIN EN 61326-1:2013-07;VDE 0843-20-1:2013-07

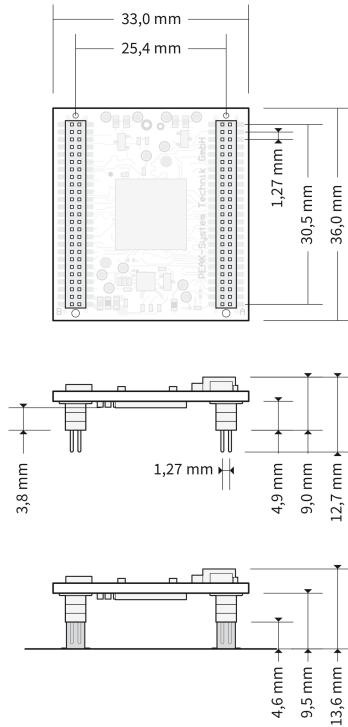

Electrical equipment for measurement, control and laboratory use - EMC requirements - Part 1: General requirements (IEC 61326-1:2012); German version EN 61326-1:2013

Darmstadt, 7 May 2020

A handwritten signature in black ink, appearing to read "Uwe Wilhelm".

Uwe Wilhelm, Managing Director

# Appendix B Dimension Drawings

The scale of the drawings differs from an 1-to-1 representation.

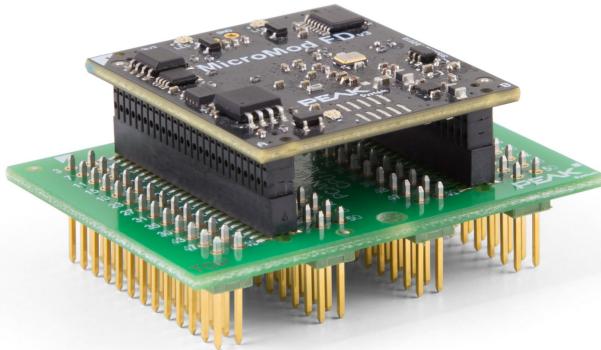

Pitch of connection pins: 50 mil  $\approx$  1.27 mm

Lower figure: example for plug-in positioning on a motherboard. Possible socket strip (2 pieces) as counterpart to the PCAN-MicroMod FD: Amtek 5PS3MSA44-225GONPNRU-00

# Appendix C CPU Adapter for 2.54 mm Pitch

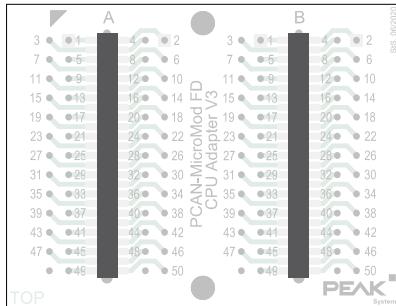

## C.1 Description CPU Adapter

The pin strips of the PCAN-MicroMod FD have a 50 mil/1.27 mm pitch. On request, PEAK-System offers an adapter for circuit boards with 100-mil/2.54-mm grid.

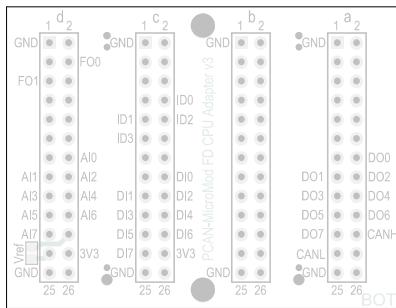

The CPU adapter has a circuit board with two socket strips for holding the PCAN-MicroMod FD and four pin strips with 100-mil-/2.54-mm pitch. The latter are supplied loose and can be plugged into the board and soldered if required.

## C.2 Pin Assignment CPU Adapter

Schematic view of the adapter from above (two socket strips for holding the PCAN-MicroMod FD)

B40	d20	Ain-6	
B42	d21	Ain-7	
B44	d22	Vref-out	Reference voltage 3.0 V, can be connected to pin B46 as internal reference
B46	d23	Vref-in	Reference voltage input for 12-bit ADC, pin B44 recommended as source
B48	d24	3V3in	Supply voltage input 3.3 V DC, 100mA (connected to B47)
B50	d25	GND	Ground

### C.3 Dimension Drawings CPU Adapter

### Dimensions of the CPU adapter (top view)

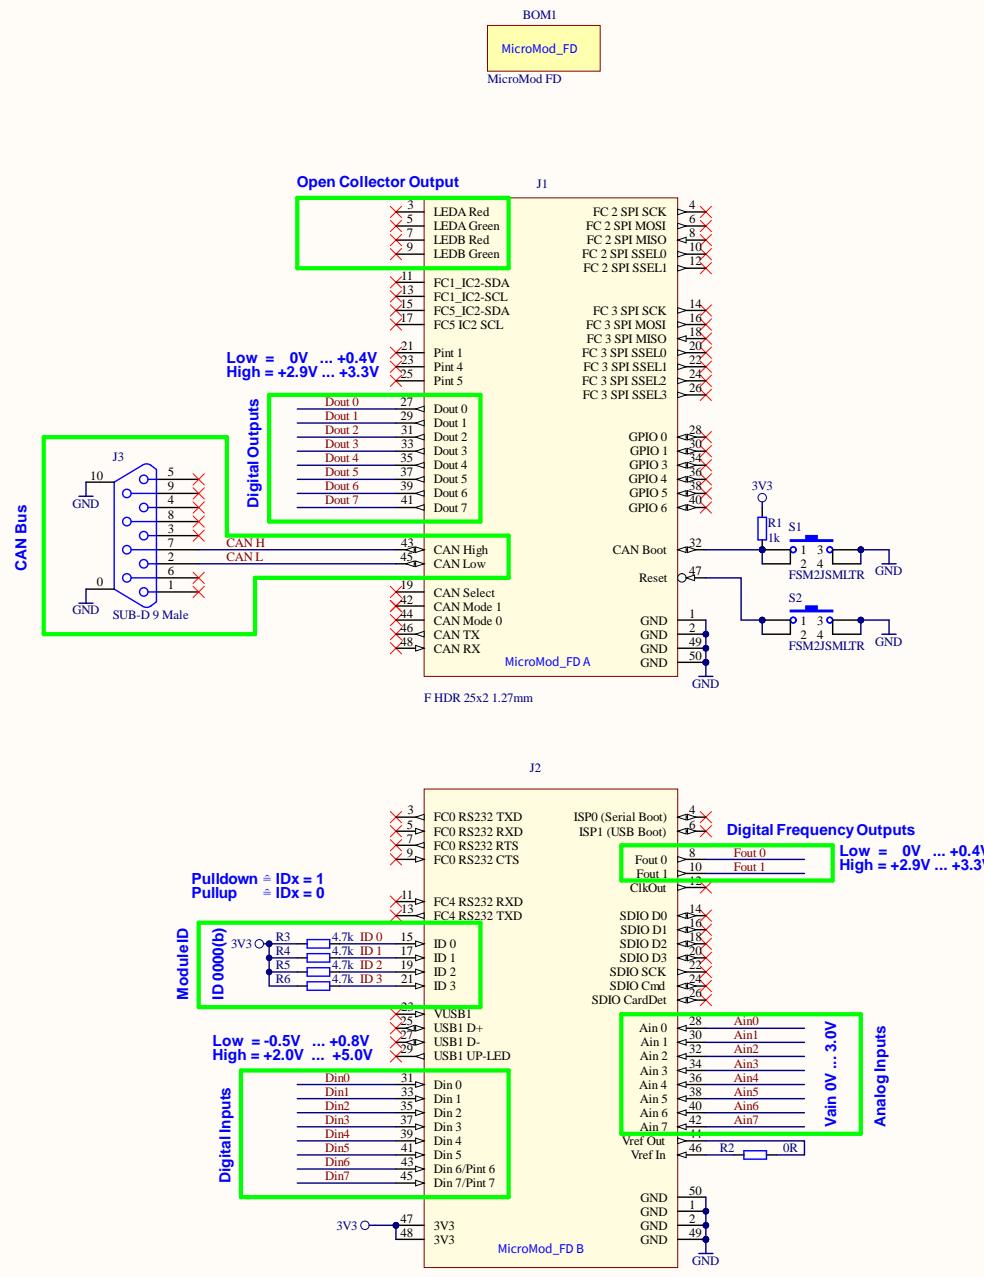

Height dimension of the CPU adapter including PCAN-MicroMod FD

# Appendix D Minimum Circuitry

The following diagram shows the minimum circuitry required to operate the PCAN-MicroMod FD.

**Tip:** The download area for the PCAN-MicroMod FD on our website contains additional library files (Altium Designer file formats) that can be used for simplified integration in own circuit diagrams with the MicroMod FD.

# Appendix E Changelog User Manual

This section lists essential changes in the recent User Manual releases.

## Changes since document version 1.0.0

- Documentation of the pin adapter for the 100 mil/2.54 mm pitch (on page 25)
- Diagram for minimum circuitry contains more explaining captions (on page 32)
- LED B of the MicroMod FD indicates invalid configuration with alternating red-green blinking (since firmware version 1.9.7, was quick green blinking before) (on page 14)
